

Haskoning in Australia

With a presence in Australia since 2011, Haskoning has grown into a trusted engineering consultancy with over 80 staff across Sydney, Brisbane, Newcastle, Darwin, and Auckland. We combine global expertise with local knowledge to deliver sustainable, resilient solutions for coastal, maritime, and water's edge developments. Our multidisciplinary teams support clients through all project phases—from concept to construction—bringing deep technical insight and a commitment to enhancing society together.

Coastal engineering and waterfront development

Australia's coastline is a dynamic and diverse landscape facing increasing challenges from sea-level rise, erosion, and extreme weather events. At the same time, coastal regions are experiencing rapid urbanisation and development, heightening the need for sustainable and resilient infrastructure.

We bring a strong understanding of coastal processes, hazards, and climate change impacts. We work closely with local and state governments across Queensland and New South Wales, delivering practical and effective coastal management plans that enhance resilience for communities and ecosystems.

Our key services and expertise

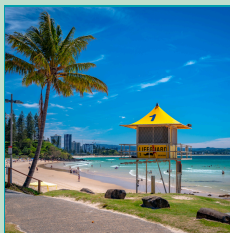

- Coastal hazard assessments
- Coastal modelling
- Coastal protection feasibility and design
- Climate change adaptation and resilience
- Coastal management planning
- Environmental assessments and approvals
- Metocean data collection and analysis
- Recreational boating facilities
- Dredging and reclamation
- Marine and coastal restoration

Featured projects

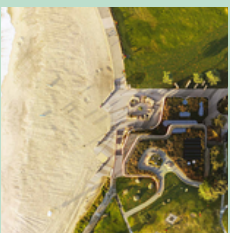

Palm Beach, Gold Coast

Holistic beach nourishment to protect the coastline from erosion and storm impacts.

Queensland Surf Life Saving Clubs

Coastal and climate risk assessments for 58 surf clubs across Queensland, supporting Surf Life Saving Queensland and local councils in safeguarding vital community infrastructure.

Waverley Council Seawall Design

Designed a modern seawall to meet surf lifesaving and beach access standards while addressing coastal protection needs and rising sea levels
